

# Reflection #1

Chris Tanner  
AC297R - Computational Science and Engineering Capstone Project

February 6, 2020

Please take some time to think about the following and provide earnest responses below.

**In terms of technical abilities within Computer Science/Data Science/Math, etc, what do you identify as your biggest strengths?**

**What do you identify as your biggest weaknesses?**

**What is your prior experience and interest in research?**

(continued on back)

How would you describe your communication abilities (oral and written), comfort giving public speeches, etc?

My aim in this course is to provide opportunities for each student to showcase his/her/their wide-range of talents, and to gain hands-on practice to further hone certain aspects before graduating to the next chapter of one's professional life. While we only have one semester together before you graduate, which of the above areas in particular do you hope to exercise and improve upon?

Aside from self-improvement, are there particular aspects about this course that you're either excited about or leary of (or if you're just taking the course to fulfill degree requirements, it's okay to state that, too)?
